

Tait's P25

Tait's P25 simulcast solution combines knowledgeable staff with intelligent base stations and can reduce installation costs, maintenance burdens and site storage. The licensable software features such as the simulcast controller, centralized voting and IP functionality are built into Tait's base station, eliminating the need for additional external equipment, and the need for a "prime" site. The built-in functionality reduces capital costs because less equipment is required from the outset and upgrades can be managed without visiting the site. Utilizing the P25 Compliance (CAP)-tested TB9100 base station as the network's core, Tait's experienced engineers will draw upon industry-recognized TSB-88 based prediction modeling methodology and intelligent GPS modeling to design a system that can deliver the ultimate in redundancy. With Tait's P25 simulcast solution, several sites can be utilized as a central voter to reduce the risk of network failure and ensure network reliability.

Laptop Lineup

The Web-based photo lineup is here. Now detectives and other law enforcement personnel can create and display their own multi-person lineups – in the office or in the field – without having to wait for a technician to become available. Laptop Lineup is quick and easy. Uploading the suspect's photo and entering demographic and personal characteristics takes just a few simple steps. The rest is automatic. Laptop Lineup connects via the Web to Thinkstream's database of more than 100,000 booking photos, selects those that resemble the suspect's and displays a six or eight-person lineup.

If any of Thinkstream's matches aren't close enough to the suspect's photo to make a perfect lineup, it takes only moments to search for suitable replacements and drop them in. Before another perpetrator leaves the jurisdiction or the memory of another witness begins to get hazy, look into Laptop Lineup. And watch your conviction rates rise.
